

How To Get The Network IP Address Of The Bixolon E300 Receipt Printer

Please follow the steps below to print the network IP Address of the receipt printer.

1. Turn **OFF** the [**POWER SWITCH**] of the printer.
2. Press and hold down the [**ARROW PAPER FEED**] button and **TURN ON** the [**POWER SWITCH**] while keeping your finger pressed down on the [**ARROW PAPER FEED**] button.
3. When the printer starts printing, **REMOVE** your finger from the [**ARROW PAPER FEED**] button.
4. Again **press and hold down** the [**ARROW PAPER FEED**] button until it does another printout and then **remove your finger from the button**.
5. Then **quickly press** the [**ARROW PAPER FEED**] button **once**, and then **press and hold it down** until another printout is printed.
6. Then again, **quickly press** the [**ARROW PAPER FEED**] button **once**, and then **press and hold it down for a longer period of time** until another printout is printed.
7. On this final printout at the bottom will be a section called **ETHERNET SETTING** and you need the second line which says **IP ADDRESS**.
8. Now you must **TURN OFF** the printer [**POWER SWITCH**] and **wait 5 SECONDS** and then turn the printer [**POWER SWITCH**] **back ON** again so that it just displays the **Green power light** by the [**ARROW PAPER FEED**] button (if you have both a green and red light showing you have not done this step 8 correctly).
